PANTHER LAB

--Cut out the panther on the outside lines.

--Fold the tabs, and make a 3 dimensional panther.

--Place one LED in each eye, puncturing the LED legs (leads) through the paper.

--On the inside of the Panther Head, connect the shorter leg to the negative side of the coin cell battery.

--Connect the longer leg to the positive side of the coin cell battery.

--Tape the LEDs to the batteries with electrical tape on the inside of the head.

--Now tape your entire panther together with scotch tape.

--Use resistors and copper tape for more advanced circuitry!
